HACKINDIA AI-FIRST STARTUP HACKATHON 2026

SmartMenu

AI-Powered QR Menu SaaS for Restaurants

Making Restaurant Menus Smarter, Simpler, and More Accessible.

SmartMenu

Built by Team 404 Founders

THE PROBLEM

Traditional Menus Need a Smarter Alternative

Updates create repeated work

Paper menu updates create repeated operational effort.

Information drifts

Keeping information consistent across menus is inconvenient.

Mobile browsing is expected

Customers want a convenient way to browse dishes on mobile.

Owners need one source

Owners need one centralized place to manage their digital menu.

THE PRODUCT

Meet SmartMenu

A web-based SaaS platform for creating and managing digital restaurant menus accessible through QR codes.

Centralized

One place to manage menus.

Mobile-first

Designed for customer browsing.

QR access

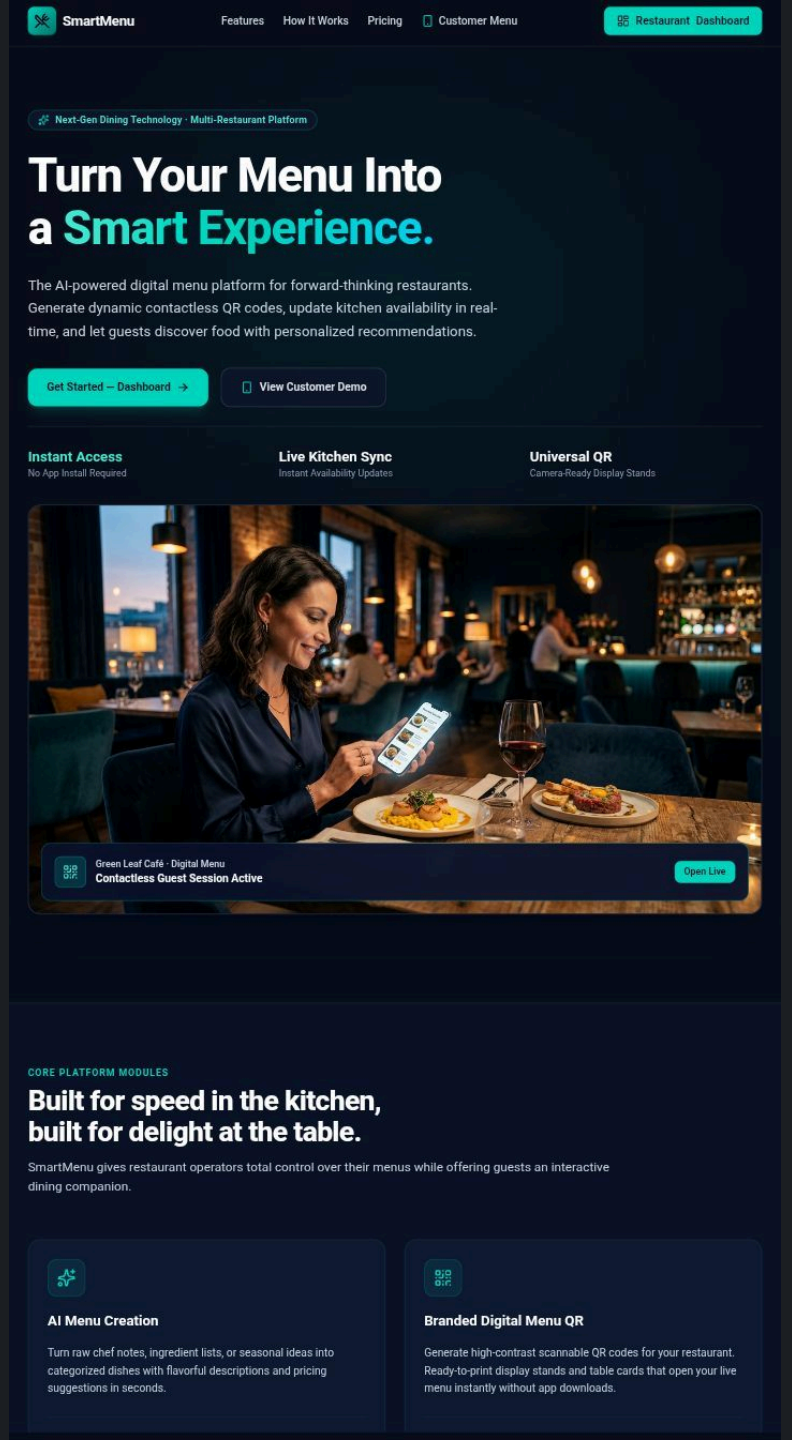

Open the menu instantly.

Discoverable

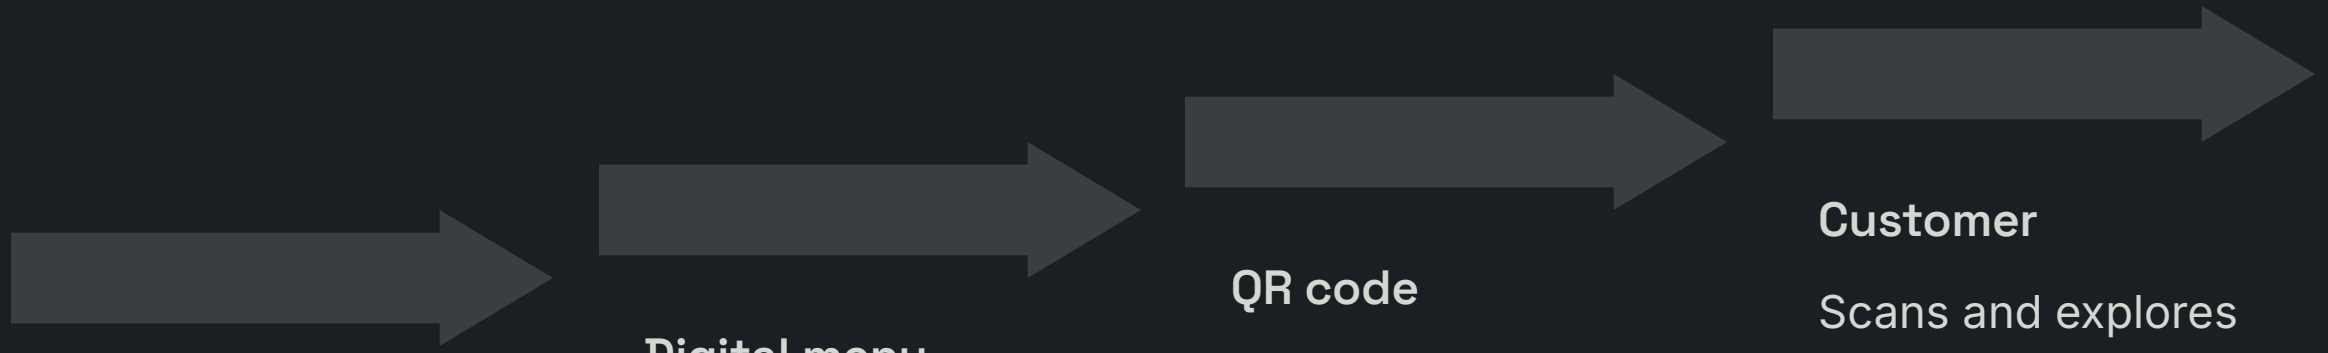

Search and dietary filters.

Measurable

Menu engagement analytics.

From Restaurant Menu to Digital Experience

Restaurant owner

Manages restaurant and menu information.

Digital menu

Organizes dishes, categories, prices, descriptions, and dietary information.

QR code

Provides a convenient access point to the menu.

Customer

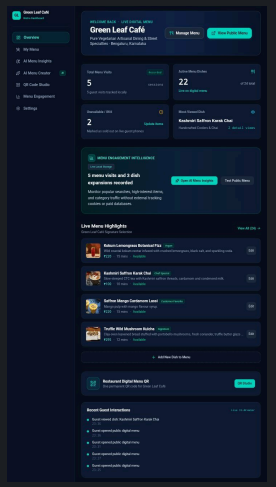

Scans and explores the menu on a mobile device.

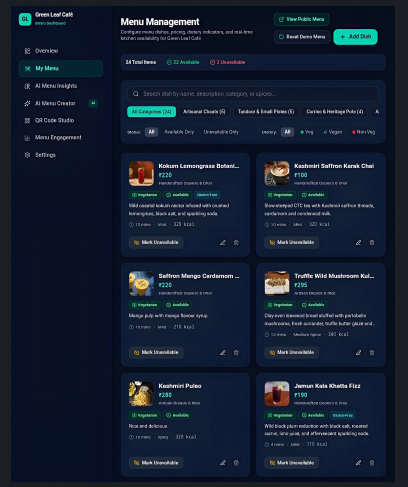

This flow does not imply ordering or payment.

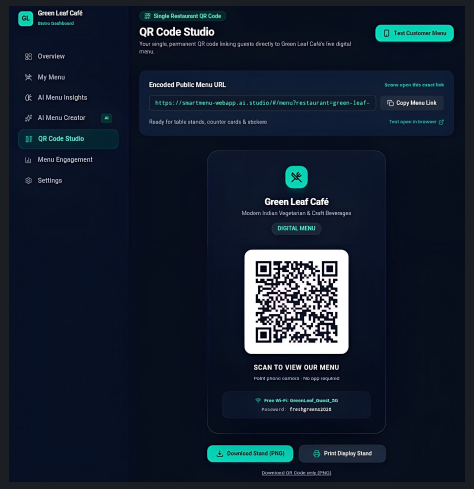

THE PLATFORM

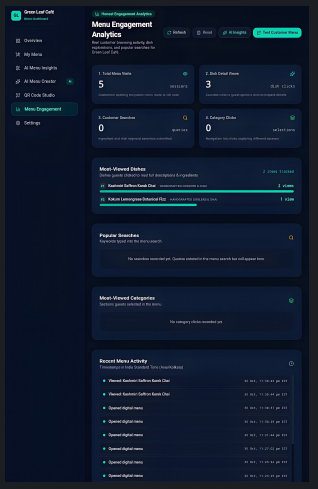

One Platform. Multiple Capabilities.

- Restaurant owner dashboard
- Menu and category management
- Dish details and image management
- QR Code Studio
- Customer-facing digital menu
- Search and dietary filters
- Menu engagement analytics
- Rule-based menu insights

THE BUILD

Built with Modern Web Technology

Restaurant owner / Customer →

Web-based user interface for restaurant owners and customers.

SmartMenu Web Application →

Connects the user interface to Supabase services.

Supabase services

Authentication: Sign-in and access.

Database: Restaurant and menu data.

Storage: Dish images.

Row Level Security and access policies support data protection.

Development was AI-assisted using coding and productivity tools.

AI Menu Insights currently uses rule-based analysis of menu engagement data, not a live generative AI model.

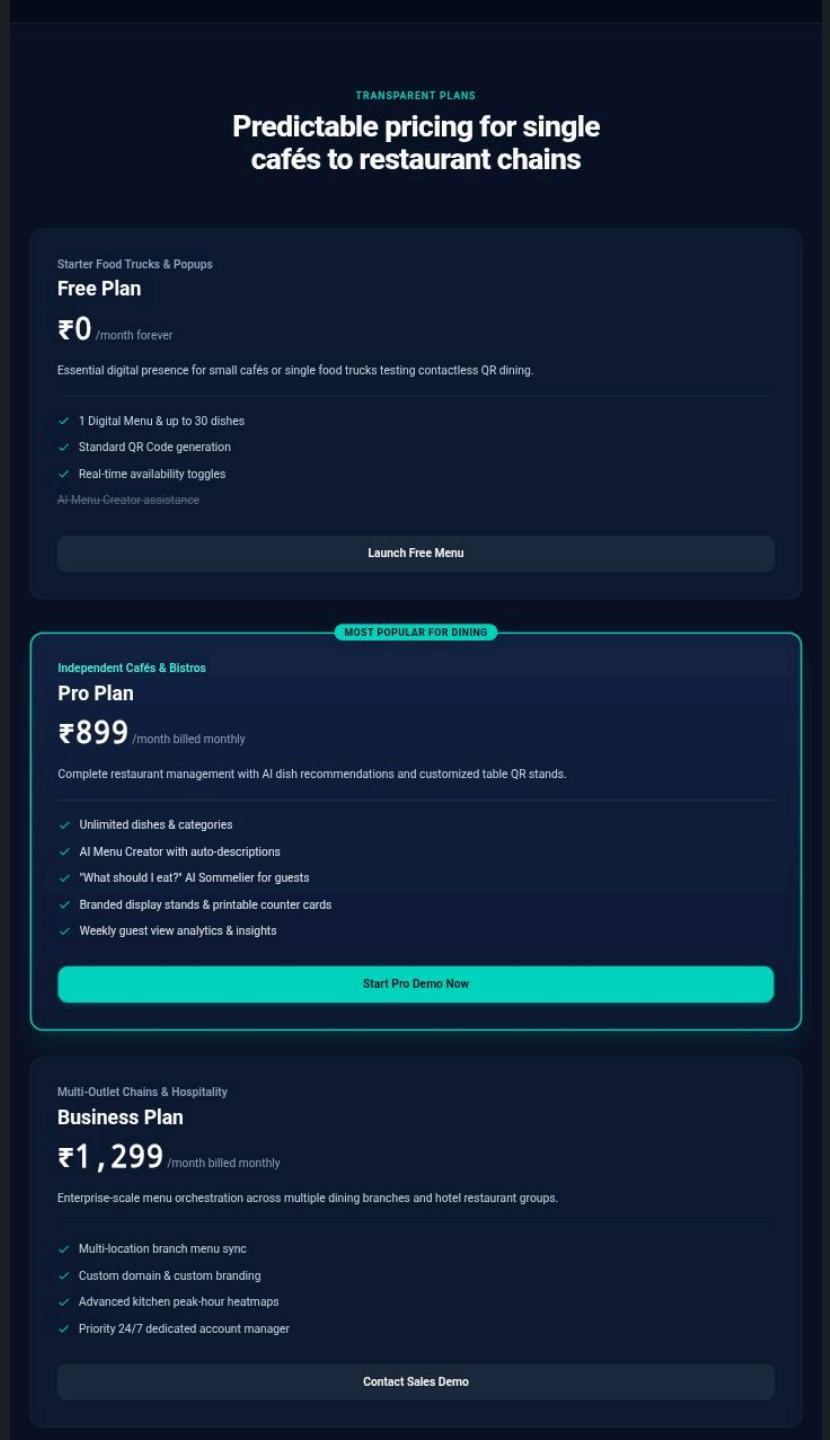

THE BUSINESS MODEL

A SaaS Model for Restaurants

PROPOSED BUSINESS DIRECTION

- Restaurants subscribe to use the digital menu management platform.
- Potential future paid tiers could add customization, analytics, and management capabilities.
- The platform could extend to restaurant groups and additional business needs.

Proposed business direction, not currently implemented pricing.

THE ROAD AHEAD

The Future of SmartMenu

Current capabilities

- Restaurant and menu management
- QR-based digital menu access
- Customer-facing browsing and search
- Menu engagement insights

Potential future improvements

- Enhanced AI-assisted menu creation
- More advanced analytics
- Additional customization options
- Optional table-specific QR codes
- Online ordering and payment integrations, if developed in the future
